

The Maryland Department of Natural Resources neither recommends nor endorses any product or service. This information is provided for informational assistance only. Use of any equipment listed below does not guarantee compliance with the Clean Water Act or any other statute or regulation. This list is not comprehensive. Independent research may reveal other vendors. To add a vendor to this list call the Clean Marina office at 410-260-8773.

I. Pressure Wash Water Recovery and Recycling Systems

This type of system usually requires a concrete wash down pad with engineered settling tanks and plumbing as well as shelter for the equipment to prevent freezing. Systems utilize different technology to filter the water for re-use.

Equipment Company	Contact Information	Product/specialty
<i>Aquas Group</i>	Rob Sheldon 830 Waterman Avenue East Providence, RI 02914 t: 401.437.8612 f: 401.437.8615 c: 401.487.3245 www.aquas-group.com	Wash water recycling systems and Wash water treat and discharge systems

II. Portable Wash Water Capture Systems

This type of system generally does **not** require plumbing, settling tanks, or a concrete wash pad. They consist of racks, mats, or liners that can be placed where needed to contain and capture wash water. *As of September 1, 2012 marinas/boatyards will be required to capture all wash water for testing, prior to discharging to waters of the state (surface or ground). The systems below may help a boatyard currently washing over the ground to comply with this requirement.*

Equipment Company	Contact Information	Product/specialty
Basic Concepts	Basic Concepts, Inc. 1310 Harris Bridge Road Anderson, SC 29621-3410 P: 1-888-810-3979	Drive over pads to contain waste waters
