The facilities and services of the Maryland Department of Natural Resources are available to all without regard to race, color, religion, sex, sexual orientation, age, national origin or physical or mental disability. This document is available in alternative format upon request from a qualified individual with disability.

Cover photo: Halberd-leaf Rosemallow (*Hibiscus laevis* Alloni), a watchlisted species in Maryland (Photo credit, Richard Wiegand).

ACKNOWLEDGMENTS

The Maryland Department of Natural Resources would like to express sincere appreciation to the many scientists and naturalists who willingly share information and provide their expertise to further our mission of conserving Maryland's natural heritage.

Publication of this list is made possible by taxpayer donations to Maryland's Chesapeake Bay and Endangered Species Fund.

INTRODUCTION

The following list comprises 744 native Maryland plants that are among the least understood, the rarest, and the most in need of conservation efforts. It includes species occurring in Maryland that are on the federal list of Endangered and Threatened Wildlife and Plants under the Endangered Species Act (ESA), species currently on the State's Threatened and Endangered Species list, and additional species that are considered rare or under assessment by the Wildlife and Heritage Service. This list is associated with a detailed report *Rare, Threatened, and Endangered Plants of Maryland* that provides a full taxonomic treatment and discussion of the ecology, habitat, and distributions of each species. The purpose of this list is to inform the public of rare species, to provide an indication of their degree of rarity, to solicit additional information on the status and distribution of these species, and to promote an interest in their conservation. For more information about Maryland's botanical heritage see the 2014 report of the Maryland Botanical Heritage Work Group to the Governor and the Maryland General Assembly, available at: msa.maryland.gov/msa/mdmanual/26excom/defunct/html/04botanical.html

Compiled by Wildlife and Heritage Service staff and conservation partners, this list of rare species is a result of more than 35 years of effort to gather, research, and analyze data from numerous sources, such as herbaria, scientific literature, unpublished documents, reports from botanists and amateur naturalists, and extensive field work conducted by scientists from the Department of Natural Resources (DNR). Our knowledge of Maryland's flora has grown steadily. Wildlife and Heritage Service biologists and cooperators have located species which were previously unrecorded for the state and have discovered that some species are scarcer than previous records indicated. Similarly, some species are now known to be either more widespread or less vulnerable than previously believed. Thus, this list and the conservation rank and legal status of each species are periodically revised to keep pace with new information. The list was first published in 1984, and its last revision was in 2010.

The primary Maryland law (enacted in 1975) that allows and governs the legal listing of threatened and endangered species is the Nongame and Endangered Species Conservation Act (Annotated Code of Maryland 10-2A-01). The Act is supported by regulations (Code of Maryland Regulations, COMAR 08.03.08) that define listing criteria for endangered, threatened, and endangered extirpated species; establishes the purpose and intent of collecting permits; and lists prohibited activities. Maryland regulations may be found online at: dsd.state.md.us/COMAR/ComarHome.html

The Wildlife and Heritage Service (the Service) within DNR is the lead state agency responsible for the identification, ranking, protection, and management of rare and endangered species and natural communities in Maryland. The Service seeks to identify and sustain populations of rare plants and animals through the maintenance of healthy natural ecosystems. The Service maintains a database of natural areas and occurrences of rare, threatened, and endangered plant and animal species. This database is aligned with the NatureServe network, an international association of over 80 programs that tracks and monitors species and plant communities using identical methodologies across all 50 states, Canada, and Latin America. Wildlife and Heritage Service biologists are concerned with many more species than those included on Maryland's Threatened and Endangered Species list. Some of these species are potential candidates for listing and usually require further investigation into their conservation status. Others are thought to be secure at present but are worthy of attention because of limited distributions, declining populations, or other ecological vulnerabilities.

GUIDE TO THE LIST

This list of rare, threatened, and endangered plant species is arranged alphabetically by scientific name. Space limitations precludes inclusion of the scientific authors' names for the taxa in this list. See the revised *Rare, Threatened, and Endangered Plants of Maryland* for full taxonomic treatments of each species. Taxonomy follows Weakley's *Flora of the Southern and Mid-Atlantic States* (2015); Weakley's Flora is freely available for download at herbarium.unc.edu/flora.htm. Each page of the following list includes six columns, titled (from left to right) Scientific Name, Common Name, Global Rank (G rank), State Rank (S rank), State Status (if any), and Federal Status (if any). Because taxonomists periodically update scientific names, the most relevant synonyms are embedded within the list inside brackets. Common names, global ranks, and state ranks may also be found at the NatureServe Explorer website at: explorer.natureserve.org/. At the end of the list are two appendices:

Appendix I details the changes to species' state ranks and statuses since the last publication of the list in April 2010.

Appendix II contains a list of species with unusual, non-standard ranks and has been provided to clarify their current conservation status in Maryland.

UNDERSTANDING CONSERVATION STATUS RANK AND LEGAL STATUS

Conservation status ranks are intended to indicate risk of elimination or extinction in the foreseeable future and are arranged along a simple numerical scale (1-5) with the lower numbers reflecting increasing rarity and risk. Conservation status ranks also present geographic information about rarity and risk. State ranks (S ranks) communicate the vulnerability of the species in the state; whereas global ranks (G ranks) communicate the imperilment of the species throughout its range (although most

species are far from being globally distributed). The rank of a species is determined through analyses of population number, size, viability, threats, and trends, among other things. The final metric, a combination of the numeric index (1-5) and the geographic identifier (G or S), distills this large amount of information into a single metric. Thus, for a particular plant species that has a global rank of G1 and a state rank of S1, the species is not only rare and at risk of elimination from within Maryland but also rare throughout its entire range and at risk of extinction. Similarly, a plant species with ranks of G5 and S5 relate that the plant is common in Maryland and is demonstrably secure throughout the species' global range.

Most species have single-valued conservation ranks; however, some variations are possible. Range ranks, e.g., G1G2 or S1S2, indicate the (usually narrow) range of uncertainty in the rank. For example, a species may have more populations than is typical of the lower rank, but few are protected; this may affect the viability of the population(s). A taxon (T) rank follows the global (G) rank of the full species as a qualifier to indicate the conservation status of the subspecies or variety of that species, e.g., G5T3. The latter indicates that the subspecies or variety is much rarer than the typical species; the typical species may or may not occur in Maryland. A global rank may also be followed by a 'Q'-qualifier to indicate that there are prevailing taxonomic questions for that species (e.g., G4Q). A '?'-qualifier may be used to indicate that there is a level of uncertainty in the global or state rank (e.g., G4? or S2?). Finally, the "!" symbol to the right of a species indicates that the conservation status of that species is currently under review. Definitions of conservation status ranks and rank qualifiers are presented in Table 1. State ranks for many species are modified annually or as needed to reflect current information. All member programs of the NatureServe Network of Natural Heritage Programs and Conservation Data Centers across the Western Hemisphere use the same ranking system and format. This allows direct conservation status comparisons across the political and geographic landscape, and it is one of the most powerful aspects of the Network.

Table 1. Definitions of Global (G) and State (S) Conservation Status Ranks and Rank Qualifiers.

Rank	Definitions of Global / State Ranks
GX or SX	Presumed Extirpated —Species believed to be extirpated from the jurisdiction (i.e. global, or state/province). Not located despite intensive searches of historical sites and other appropriate habitat, and virtually no likelihood that it will be rediscovered.
GH or SH	Historical (Possibly Extirpated) —Known only from historical records but still some hope of rediscovery. There is evidence that the species may no longer be present in the jurisdiction, (i.e. global, or state/province) but not enough to state this with certainty.
G1 or S1	Critically Imperiled/Highly State Rare —At very high risk of extinction or extirpation due to very restricted range, very few populations or occurrences, very steep declines, very severe threats, or other factors. Typically occurring in five or fewer populations.
G2 or S2	Imperiled/State Rare —At high risk of extinction or extirpation due to restricted range, few populations or occurrences, steep declines, severe threats, or other factors. Typically occurring in 6-20 populations.
G3 or S3	Vulnerable/Watchlist —At moderate risk of extinction or extirpation due to a fairly restricted range, relatively few populations or occurrences, recent and widespread declines, threats, or other factors. Typically occurring in 21-80 populations.
G4 or S4	Apparently Secure —At fairly low risk of extinction or extirpation due to an extensive range and/or many populations or occurrences, but with possible cause for some concern as a result of local recent declines, threats, or other factors.
G5 or S5	Demonstrably Secure —At very low risk of extinction or extirpation due to a very extensive range, abundant populations or occurrences, and little to no concern from declines or threats.
S3.1	Vulnerable and globally rare —A species that is actively tracked by the Service because of the global significance of Maryland occurrences. Although not currently threatened or endangered, Maryland occurrences may be critical to the long-term security of the species.
SE	Exotic —Established but not native to Maryland.
SNA	Not Applicable —A conservation status rank is not applicable because the species is not a suitable target for conservation activities.
SNR	Not ranked.
SR	Reported —Reported from Maryland but without persuasive evidence that would provide a basis for either accepting or rejecting the report. These species are presented in Appendix II.
SRF	Reported falsely —Reported in error from Maryland and the error may persist in the literature. These species are presented in Appendix II.
SU	Status Uncertain —A numerical rank cannot be established with confidence for reasons including lack of historical records, low survey effort, cryptic nature of the species, or concerns that the species may not be native to the state. Uncertainty spans a range of more than three ranks as defined above.

Qualifier	Definitions of Rank Qualifiers
Q	A rank qualifier —Indicates that the taxon has questionable, controversial, or uncertain taxonomic standing, e.g., treated by some authors as a species whereas others treat as a subspecies or variety or not at all.
T	A rank qualifier —Indicates that the infraspecific taxon (subspecies or variety) is ranked differently than the typical species.
?	A rank qualifier —Indicating uncertainty that may span 2-3 ranks as defined above.
!	An indicator that the conservation status of that species is currently under review.

Legal status presents a simple hierarchy of endangerment in three categories: Endangered (E), Threatened (T), and Endangered Extirpated (X). Definitions of legal statuses are presented in Table 2. Legal protection statuses of species are typically reviewed and updated, if needed, every two to three years. All species listed as threatened or endangered at the federal level also have a legal status within Maryland.

Table 2. Definitions of State and Federal legal protection Status.

State Status	Definition
Endangered (E)	A species whose continued existence as a viable component of Maryland's flora is determined to be in jeopardy.
Threatened (T)	A species that appears likely, within the foreseeable future, to become endangered in Maryland.
Endangered Extirpated (X)	A species that was once a viable component of the flora of Maryland, but for which no naturally occurring populations are known to exist.
Federal Status	Definition
Endangered (LE)	Taxa listed as Endangered under the federal ESA; in danger of extinction throughout all or a significant portion of its range.
Threatened (LT)	Taxa listed as Threatened under the federal ESA; likely to become endangered within the foreseeable future throughout all or a significant portion of its range.

ADDITIONAL RESOURCES AND IMPORTANT LINKS

National

The U.S. Department of Interior, Fish and Wildlife Service's (USFWS) Office of Endangered Species publishes a list of federally designated Threatened and Endangered species. Copies of the USFWS publications: Endangered and Threatened Wildlife and Plants, and Plant Taxa for Listing as Endangered or Threatened Species; Notice of Review (reprinted from the Federal Register), may be obtained from the Publication Unit, U.S. Fish and Wildlife Service, Washington DC 20240 or viewed at: fws.gov/endangered/

The Biota of North America Program (Synthesis of North American Flora) includes links to county-level distributions and taxonomic information of plant taxa occurring in North America at the following link: bonap.org.

NatureServe compiles data from all member programs in the Network of Natural Heritage Programs and Conservation Data Centers and provides a synthesis in the form of species summaries on their Explorer website: explorer.natureserve.org

Regional

The Virginia Botanical Associates provide an online atlas of the Virginia flora at: vaplantatlas.org.

Maryland

The University of Maryland-College Park, Norton-Brown Herbarium provides links to data and images of Maryland specimens at: nbh.psla.umd.edu.

The Maryland Plant Atlas provides information on the distribution of plant species in Maryland at: marylandplantatlas.org/index.php

The Smithsonian Institution provides online searches of plant species in the Flora of the Washington-Baltimore Area at: botany.si.edu.

For more information about Maryland's botanical heritage see the 2014 report of the Maryland Botanical Heritage Work Group to the Governor and the Maryland General Assembly, available at: msa.maryland.gov/msa/mdmanual/26excom/defunct/html/04botanical.html

To obtain additional copies of this report; to receive a copy of Rare, Threatened, and Endangered Plants of Maryland; or to receive other information on Maryland's rare species and natural areas; please contact the Maryland Wildlife and Heritage Service at Tawes State Office Building, E-1, 580 Taylor Avenue, Annapolis, MD 21401 or visit the website at: dnr.maryland.gov/wildlife/Pages/plants_wildlife/rte/rteplants.aspx

The conservation of Maryland's natural communities is vital in sustaining our natural diversity and rare species. These recurring assemblages of plants and animals are uniquely tied to a particular suite of environmental conditions and species adapted to those conditions. More information on Maryland's natural communities can be found at: dnr.maryland.gov/wildlife/Pages/plants_wildlife/nhpnatcomm.aspx

The Maryland Geological Survey (mgs.md.gov/) provides detailed physiographic maps with accompanying explanatory text, available at: mgs.md.gov/geology/physiographic_map.html.

HOW YOU CAN HELP

You can take an active part in conserving Maryland's rare species by contacting the Wildlife and Heritage Service with the following types of information:

I. Submitting information on rare, threatened or endangered species

1. Location details should be included (exact mapped location using GPS is preferred, but not required). Online applications such as Google Earth are invaluable but precise, written directions including driving and walking are acceptable.
2. Documentation that includes a photograph, description of the species, identification source, and habitat description should accompany the report.
3. Information on the ecology and or biology of the species including observed and/or identified pollinators should accompany the report.

**Additional information, including a downloadable PDF of our rare plant reporting form can be found at: dnr.maryland.gov/wildlife/Pages/plants_wildlife/rte_reportinginst.aspx

II. Assisting the Service with conservation status rank assessments

1. Submit data indicating that a species should be assigned a different rank and status, with supporting documentation.
2. Submit nominations of additional species to be included on the list or of species that should be deleted from the list, with supporting documentation.
3. Submit information on historical collections or documentation in the scientific literature.

PLANT SPECIES REPORTED, FALSELY REPORTED, OR ARE NOT A CONSERVATION TARGET IN MARYLAND

The following species do not occur in Maryland based on currently available information. Although not exhaustive, the list is included to provide clarification for those species whose rank in Maryland may be unclear due to conflicting reports or vague published accounts. Species with a state status are slated to be removed from the legal list the next time Maryland regulations (COMAR 08.03.08) are updated.

SCIENTIFIC NAME	COMMON NAME	CURRENT RANK	STATE STATUS
<i>Agalinis fasciculata</i>	Fascicled Gerardia	SR	
<i>Ampelopsis arborea</i>	Pepper-vine	SR	
<i>Ampelopsis cordata</i>	Heartleaf Peppervine	SRF	
<i>Astilbe biternata</i>	False Goat's-beard	SRF	
<i>Bacopa monnieri</i>	Coastal Water-hyssop	SRF	
<i>Berberis canadensis</i>	American Barberry	SRF	X
<i>Cardamine pratensis</i>	Cuckooflower	SR	
<i>Carex cephaloidea</i>	Thin-leaved Sedge	SRF	
<i>Carex molesta</i>	Troublesome Sedge	SNA	
<i>Carex sartwellii</i>	Sartwell's Sedge	SRF	
<i>Celtis laevigata</i>	Sugarberry	SRF	
<i>Chamaesyce vermiculata</i>	Hairy Spurge	SNA	
<i>Crotalaria rotundifolia</i>	Rabbit-bells	SR	
<i>Croton capitatus</i>	Hogwort	SE	
<i>Dichanthelium boreale</i>	Northern Witchgrass	SRF	X
<i>Dioscorea hirticaulis</i>	Wild Yam	SNR	
<i>Eleocharis geniculata</i>	Capitate Spikerush	SRF	
<i>Euphorbia pubentissima</i>	Southeastern Flowering Spurge	SRF
